

# SOLUTIONS TO ENSURE PROTECTION

## PERSONAL PROTECTIVE EQUIPMENT

PPE

Use appropriate PPE including coat, gloves and masks.

## INSTALL PLEXIGLASS/PERSPEX SHIELD

Install Perspex shield where HIV Rapid Testing (RT) is being done (similar to those used in supermarkets and nail salons).

## CLEAN PERSPEX SHIELD

Ensure that **both sides** of the Perspex shield and table are swabbed with **bleach** after each client.

## WASH HANDS

**ALWAYS** wash hands and change gloves between patients.

## UNIVERSAL PRECAUTIONS

Ensure all providers and clients are following **Universal Safety Precautions**.

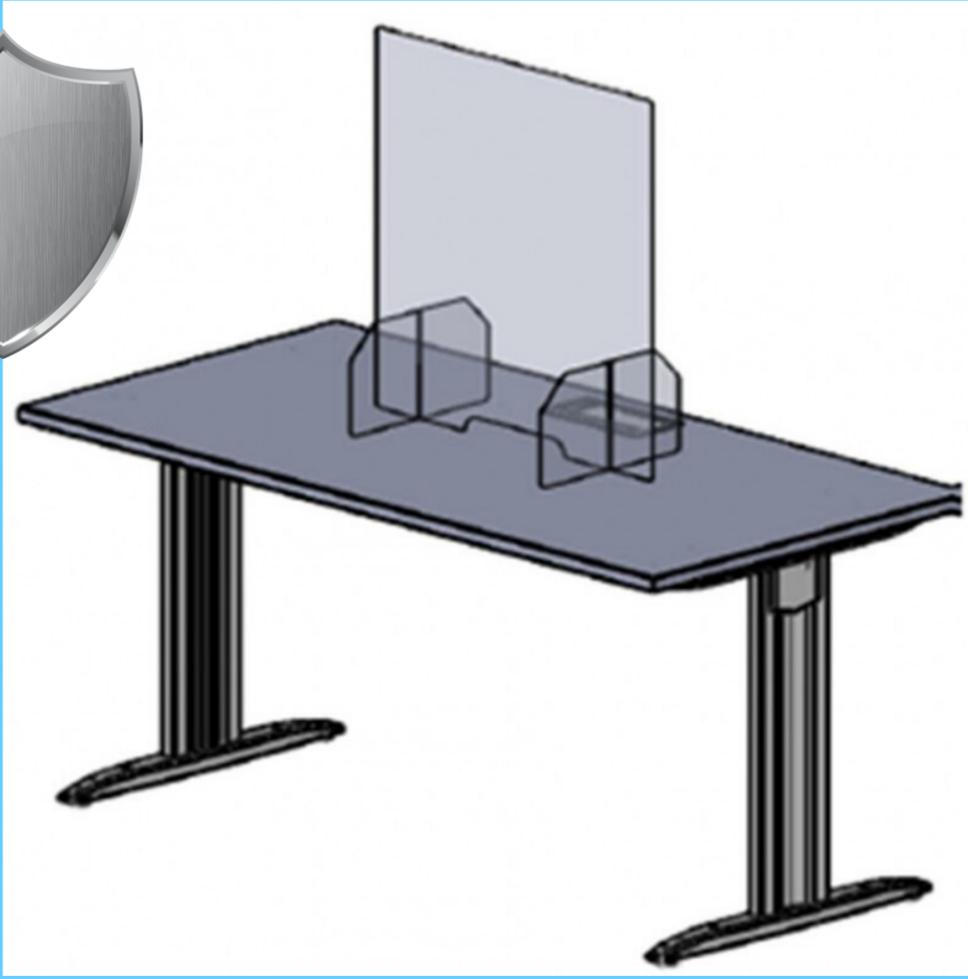

## WASTE DISPOSAL

Ensure appropriate waste collection, transport and disposal for contaminated waste.

## IMPORTANT

Plexiglass/Perspex shield is easy to install and effective in preventing droplet spread.
